## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, drawn to a method of processing observed data, classified in class 702, subclass 75.
  - II. Claims 4-6, 10, and 11, drawn to a pulse photometer including a processor operable to process the first data set and the second data set with a rotating matrix and determines a frequency of the pulse wave and pulse rate of the living body (claim 10), classified in class 600, subclass 500.
  - III. Claims 8 and 9, drawn to a pulse photometer including a processor operable to obtain a concentration of at least one light-absorbing material in blood, i.e. oxygen saturation, hemoglobin, or an injected dye (claim 9), classified in class 600, subclass 322.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group III has separate utility such as determining the concentration of a blood constituent. Group II's utility is with detection of pulse wave or pulse rate. See MPEP § 806.05(d).

Art Unit: 3735

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process: (MPEP § 806.05(e)). In this case , the method Group I does not require a pulse photometer and its general scope encompasses general processing devices with frequency analysis.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, restriction for examination purposes as indicated is proper.

A telephone call was made to Darryl Mexic on 07 June 2006 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
